WATER TREATMENT AND ANTI-LEGIONELLA PRECAUTIONS, PONTIAC FEVER

We can all recognise dirty water when we see it but is clear water clean and fit for its intended purpose?

NOT ALWAYS SO! Particularly where the water is stored (potable) for the following uses

- As tank cold water to feed shower, wash hand basins and baths.
- As stored water for cooling systems.
- As stored hot water in cylinders in a distributed hot water system.

The HS (G) 70 Regulation of the Health and Safety Executive requires all Employers to

"Carry out an assessment to identify and assess the risk of legionellosis from work activities and water sources on the premises and any precautionary measures. The assessment should include identification and evaluation of potential sources of risk and the particular means by which exposure to legionella is to be prevented"

As Wellington Insulation Co. Ltd. we can offer:

- A full survey and risk assessment of your premises to satisfy HS (G) 70 Statutory requirements.
- Identification of any problems and a remedy.
- A programme for chlorination.
- Upgrade of tank systems to water Bye Law 30 standards.
- Replacement / re-lining of defective tanks.
- Manufacture and provision of insulated tank lids where missing.
- Insulation of tanks and hot water cylinders to prevent critical temperature for the spread of bacteriological growth occurring.
- De-scale of tanks and cylinders.

In short, a comprehensive survey and assessment of your water storage problems with a remedy for any problems you may have. Our work is guaranteed by individual certification on every job and backed up by independent laboratory assurance. All work can be done to suit the client's requirements, (out of hours, holiday periods, shut-downs, weekends).
